

# WiRAD Internet Radio

Until now, the thousands of internet radio stations available online have been bound to bulky computers. The WiRAD Internet Radio promises to free this medium from the desktop. This portable device is 802.11b wireless enabled and can connect to MP3 format streaming stations at any wireless hotspot. The device may be configured through the easy-to-use provided software and a USB interface. The bundled desktop software also makes it easy to stream from home computers to the device, allowing users to carry their entire music collection to any wireless hotspot.
